

Extraction Systems

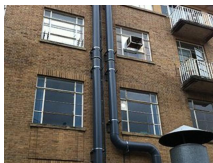

Kinetic will complete a site survey to ascertain the most suitable ductwork route and fan location, issuing AutoCad drawings for client approval as standard.

Kinetic offer a wide range of extract systems utilising centrifugal fan units which are fabricated from polypropylene, fire retardant polypropylene or PVC with a glass reinforced plastic outer coating. These are available with fire dampers, intumescent fire collars, attenuators and HEPA filter housings.

Kinetic are able to undertake a full turnkey installation, including the supply and installation of all electrical equipment to control and operate the extract systems.
