

Vented Enclosures

Kinetic offer a wide range of ventilated enclosures that are ideal for laboratories where processes do not demand high energy consumption or strict containment levels.

Kinetic Ventilated Enclosures are also used to house equipment and apparatus such as Rotary Evaporators where vapours may need to be extracted or equipment that is left for long periods of time without user interface.

Kinetic Ventilated Enclosures come in a range of horizontal, hinged and bi-folding.

Locking windows are available with the potential access on all four sides.
